

Digital Architecture Research Center

- ◆ The Digital Architecture Research Center was established to research and develop technologies that promote the digital revolution as a contribution to solving social issues and emerging innovations.
- ◆ We are integrating cyberspace and physical space through the creation of a digital architecture and a continuum computing platform that utilizes digital information and data in real time, leading to new value and services.

Research on the Continuum Computing Core

Information processing across a dynamic infrastructure distributing the edge-to-cloud computing continuum

- Low Latency
- High Reliability
- Trustworthiness
- Green
